VPN Tracker 6.0.2 - VPN secure network tool. (Demo)

Posted by: admin In: [MacUpdate](#)

VPN Tracker 6.0.2

VPN Tracker is the premier Mac VPN client, allowing the user to establish a safe data transfer between their Mac and their company's network. Once installed on the Mac, the corporate network is just one click away. VPN Tracker 5 has been completely re-written from the ground up and optimized for use on remote workstations. As well as an entirely new user interface, VPN Tracker 5 also features a greatly improved IPsec engine and a number of useful features for working within workgroups.

WHAT'S NEW

Version 6.0.2:

- File URLs in Secure Desktop items are no longer automatically modified to end in a forward slash (/)
- The Secure Desktop assistant now also works properly with file servers
- Fixed an issue where changes to connection actions would not be saved if you quit VPN Tracker right after
- VPN Tracker will now let you know if a connection created with the demo requires a Professional Edition license, if you're using Personal Edition
- Passwords stored in a connection are now more reliably added to your keychain after being imported

REQUIREMENTS

Mac OS X 10.4 or later.

PRICE

\$79.00
