VPN Tracker 6.2 extends Cisco support

Text Size

Inaugurates Business Pack bundles

updated 05:15 pm EST, Tue March 2, 2010

equinux has released v6.2 of [VPN Tracker](#), a Mac VPN client. The title attempts to simplify VPN use through the concept of the Secure Desktop, and by working to maintain a constant connection. The v6.2 update adds support for Cisco ASA 5500-series hardware, and speeds up connectivity for other Cisco devices.

Launching in parallel is the concept of the [Business Pack](#), a bargain bundle for companies with two or more VPN workstations. Each Pack is allowed to contain up to three Professional editions of VPN Tracker -- which support configuration and administration -- and up to 25 Player editions. An individual VPN Tracker 6 license costs \$99 US, but the cost diminishes as the size of a bulk order increases. Updating from v6.x to 6.2 is free.
